

Grojean Transportation

Hello,

This letter is to assist you in removing the Host on Demand Cached Client that you used in the past to connect to the AS/400 through HOD. In order to connect to the AS/400 through HOD using the new address, perform the following steps.

1. Go to the HOD main page by typing the following address into your Internet Explorer web browser. <http://64.122.131.250/hod/hodmain.html>. Choose the option to remove the Cached Client and follow the instructions to remove.
2. Return to the same page and select Cached Client. Accept the install warning. You should be prompted to re-start your browser. Return to the HOD main page again and re-select the Cached Client.
3. A log in box should appear. At this time add this "site" to your favorites and be sure and name it something you can recognize, such as "New HOD". Remove your old HOD favorite to get it out of the way.

Please contact the Grojean IS help line if you are having problems loading this new link to HOD.

Thanks,
IS staff
